

Description

Most levels see the world as level or plumb, but with the 'Digital Laser Level' angles over a full 360° range can be measured. Installing a deck or stair rail, extending a roof or determining how much an old floor has sagged is easier and less time consuming.

Using the built in spot laser, laying out ground work with a gradient for drainage is more accurate and easier than ever before. The level is built from high strength high quality materials, and is designed to withstand the everyday wear and tear that tools receive on site. It also comes with a padded carry case for protection when not in use.

Specification

- Measuring range 360°, accuracy ±0.1°
- Level and plumb vial accuracy 1mm/m
- 9v PP3 battery (Supplied)
- Length of level: 600mm

Special Features

- Independently switchable spot type laser
- Switchable sounder at level and plumb for 'hands free' operation
- 'Hold' button to freeze current reading
- Simple recalibration procedure to restore factory accuracy
- Auto switch-off after 5 minutes not in use
- Machined flat and 'V' base for grading pipework

Quality

- Heavy duty corrosion resistant aluminium frame
- Padded protective case with carrying handle
- Unbreakable precision acrylic block vials
- Sealed display module made from tough ABS

Digital Display

- Reads through 360° to within ±0.1°
- Switchable display between degrees and % slope
- Display always reads 'right side up'
